Examples:
- Our x295 ISA
- Data General Nova minicomputer
- Texas Instruments TMS9900
- National Semiconductor IMP-16

Examples of byte-addressable ISA:
- Intel Core i7 and i9
- AMD64 Epyc
- MIPS64
- RISC-V

*NOTE: These ISA's have larger memory size than $2^{12} \times 8$, i.e., the width of their memory address is larger than 12 bits.
