

CMPT882 Project Proposal

Each individual/group should submit a project proposal to me by June 29. This does not have to be lengthy, but should contain the following information so that both you and I can know that you're on the right track.

- Problem to be addressed
 - This could be one of the recommended projects (action recognition, object category recognition), or one of your own.
- Techniques to be developed
 - If there is a paper(s) you plan to follow, please name it. If there is a set of techniques, please list them.
 - For the major pieces of the work, state what code you plan to implement and what code you plan to use from other sources.
- Dataset(s) to be used
 - e.g. Weizmann action dataset, Caltech 101

If you are unsure about the project you're considering, or need some ideas for a project to work on, please come and see me.

Please send the proposal to me via email in PDF or plain text format.
