Introduction

- **Who am I?**
  - Nick Sumner (wsumner@sfu.ca)
  - Research Faculty

- **Who is your TA?**
  - Aishwerya Kapoor

- **What is the course website?**
  - OR: just search for “CMPT 373 sumner”

- **Where can you discuss course issues?**
  - CourSys
    (https://coursys.sfu.ca/2020sp-cmpt-373-d1/discussion/)
What is this course?

- What have you heard?
What is this course?

- What have you heard?

- My perspective... hands on experience
  - workflows
  - tools
  - project management
  - writing better code
  - dealing with a (possibly troublesome) customer
  - dealing with (and avoiding) problems
What is this course?

- What have you heard?
- My perspective... hands on experience
  - workflows
  - tools
  - project management
  - writing better code
  - dealing with a (possibly troublesome) customer
  - dealing with (and avoiding) problems

- Slightly different than many courses
  - Less emphasis on “getting the right answer”
  - More emphasis on being aware & using the right skills
Why take this course?

- Most software projects fail(!)
  - Up to 85% depending on definition of “failure”
Why take this course?

- Most software projects fail(!)
  - Up to 85% depending on definition of “failure”
Why take this course?

• Most software projects fail(!)
  – Up to 85% depending on definition of “failure”
Why take this course?

Corrective Measures and Process

Start  Progress  Progress  Progress  Ship

Goal
Why take this course?

- Most software projects fail(!)
  - Up to 85% depending on definition of “failure”

- Most graduates with a CS degree are not ready
  - Software engineering is about *process* and *awareness*
  - Software development is a *craft* that requires practice
Why take this course?

- Most software projects fail(!)
  - Up to 85% depending on definition of “failure”

- Most graduates with a CS degree are not ready
  - Software engineering is about process and awareness
  - Software development is a craft that requires practice

- Hands on experience yields an advantage
  - You can better understand how to create a product that has value both now and in the future.
What will we be doing?

- On your own
  - Reading
  - Exercises with tools
What will we be doing?

- **On your own**
  - Reading
  - Exercises with tools

- **In groups / tutorials**
  - One development project with unclear requirements
What will we be doing?

- On your own
  - Reading
  - Exercises with tools

- In groups / tutorials
  - One development project with unclear requirements

- In class
  - Introduction to tools and techniques
  - Discussions about the reading
  - Discussions about the tools
  - Discussions about code
Grading

- Subject to change as necessary

- **Breakdown:**
  - (10%) Responses to reading
  - (30%) Exam
  - (15%) Class discussions & code reviews
  - (25%) Useful contribution to semester project
  - (20%) Exercises
Reading

- Assigned chunks of reading
  - Often ~200 pages per 1-2 weeks
  - Books are available as e-books in library
Reading

• Assigned chunks of reading
  – Often ~200 pages per 1-2 weeks
  – Books are available as e-books in library

• Responses
  – A 2 page critical reaction to the reading
  – Single spaced
  – Must include 3 units of:
    • A quote, with citation
    • 1-2 paragraphs discussing the quote
  – Relate the material to your own experiences
  – Form an opinion about it, and justify it
**Reading**

- Assigned chunks of reading
  - Often ~200 pages per 1-2 weeks
  - Books are available as e-books in library

- Responses
  - A 2 page critical reaction to the reading
  - Single spaced
  - Must include 3 units of:
    - A quote, with citation
    - 1-2 paragraphs discussing the quote
  - Relate the material to your own experiences
  - Form an opinion about it, and *justify* it

- First assignment posted after class
Quizzes

- Pop quizzes may be given *throughout* the class
- **Cover material from:**
  - Reading
  - Videos
  - Exercises
  - Lectures
  - Discussion
Discussions

- Code Review Thursdays:
Discussions

- Code Review Thursdays:
  - Each group will submit 100-200 lines of code each week by Friday, 10pm
Discussions

- **Code Review Thursdays:**
  - Each group will submit 100-200 lines of code each week by Friday, 10pm
  - I’ll assign members from other groups to review the code (I may choose some other code entirely)
Discussions

- **Code Review Thursdays:**
  - Each group will submit 100-200 lines of code each week by Friday, 10pm
  - I’ll assign members from other groups to review the code (I may choose some other code entirely)
  - Individual reviews due by 10pm Tuesdays
Discussions

- **Code Review Thursdays:**
  - Each group will submit 100-200 lines of code each week by Friday, 10pm
  - I’ll assign members from other groups to review the code (I may choose some other code entirely)
  - Individual reviews due by 10pm Tuesdays
  - Submitters & reviewers for ~2 submissions will present on Thursday.
Discussions

• Code Review Thursdays:
  – Each group will submit 100-200 lines of code each week by Friday, 10pm
  – I’ll assign members from other groups to review the code
    (I may choose some other code entirely)
  – Individual reviews due by 10pm Tuesdays
  – Submitters & reviewers for ~2 submissions will present on Thursday.

• In class discussions of both code & readings focus thematically on one core issue:

  Complexity
Semester project

- You will interact with me as a customer in tutorials
Semester project

- You will interact with me as a customer in tutorials
- The requirements of the project *will change*
Semester project

- You will interact with me as a customer in tutorials
- The requirements of the project will change
- You will use (and be evaluated in part on) skills from the exercises in the project
Semester project

- You will interact with me as a customer in tutorials
- The requirements of the project *will change*
- You will use (and be evaluated in part on) skills from the exercises in the project
- **Different teams may receive different requirements**
Semester project

- You will interact with me as a customer in tutorials
- The requirements of the project *will change*
- You will use (and be evaluated in part on) skills from the exercises in the project
- Different teams may receive different requirements
- You should expect to *personally* contribute $\geq 1K$ quality SLOC in order to pass
All code pushed to a project repository may be viewed, analyzed, and critiqued by all students *in class* (even in future semesters).
Project teams

- Assigned teams of up to 8
Project teams

- Assigned teams of up to 8

- Following an informal scrum-like process
  - Each team meeting will involve:
    - Discussion of what you did since the last meeting
    - What the present obstacles are to meeting goals
    - A plan for the next meeting
Project teams

- Assigned teams of up to 8
- Following an informal scrum-like process
  - Each team meeting will involve:
    - Discussion of what you did since the last meeting
    - What the present obstacles are to meeting goals
    - A plan for the next meeting
- I will act as both customer & coach
Goals

- **Writing good code as a team**
  - Some teammates will write well from the beginning.
  - Some will need help from teammates.
Goals

- Writing good code as a team
  - Some teammates will write well from the beginning.
  - Some will need help from teammates.
  - Working together is the only real way.
Goals

- **Writing good code as a team**
  - Some teammates will write well from the beginning.
  - Some will need help from teammates.
  - Working together is the only real way.
  - This is just as true in industry.
Goals

- **Writing good code as a team**
  - Some teammates will write well from the beginning.
  - Some will need help from teammates.
  - Working together is the only real way.
  - This is just as true in industry.

- **Manage complexity & change**
  - Requirements will change in practice.
  - I will try to change requirements that force design changes.
Goals

- Writing good code as a team
  - Some teammates will write well from the beginning.
  - Some will need help from teammates.
  - Working together is the only real way.
  - This is just as true in industry.

- Manage complexity & change
  - Requirements will change in practice.
  - I will try to change requirements that force design changes.
  - Better designs & process will make the transitions easier.
And we’re off...
